## Wooden floor and underfloor heating

The subject of underfloor heating causes quite a bit of stir. Almost every day the question comes up in our branch: 'Is it possible to install a wooden floor on top of underfloor heating?' The answer is, **"Yes, it is possible!"**

### Advantages

#### Durable

*Lower energy consumption due to lower temperatures in the heating system.*

#### Atmosphere

*Warm material with an authentic and unique look.*

#### Comfort

*A wooden floor on top of underfloor heating feels extra comfortable.*

*Almost any kind of floor heating is suitable for a wooden floor.*

Wooden floors are great to combine with underfloor heating. Wood is a natural product with comfortable characteristics such as a high insulation value, and a long lifetime. The wood absorbs the ambient temperature and holds this temperature for a longer period of time. Ask your Cinzento dealer for all the possibilities.
